

Il-2 bomb load instructions

Part designations use **blue numbers** so they are not mixed up with parts of the aircraft model

Parts from the Il-2 model are given in brackets

1. Bombs of different size are all built the same way
numbers given are for small bombs

fold fins to a star, then
glue to a cross section

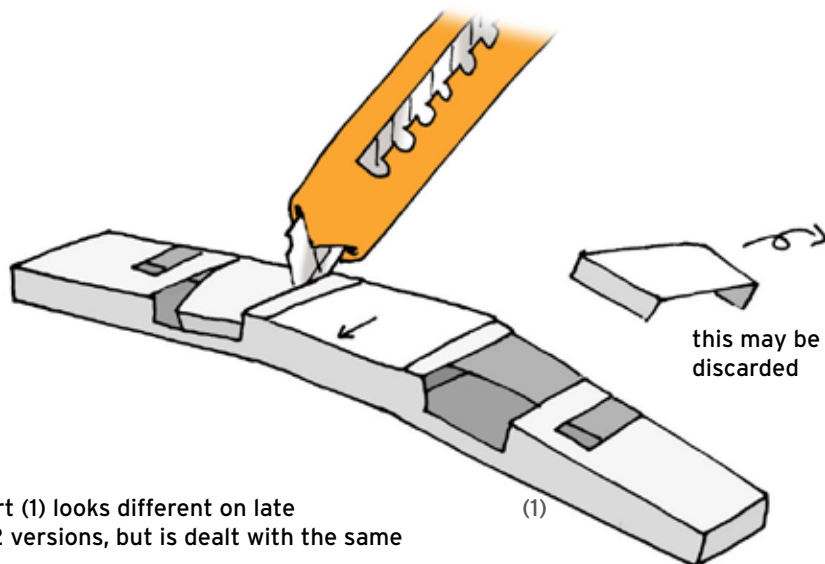

Bomb parts that equal
each other:

small	medium	big
1	5	9
2	7	10
3	6	11
4	8	12

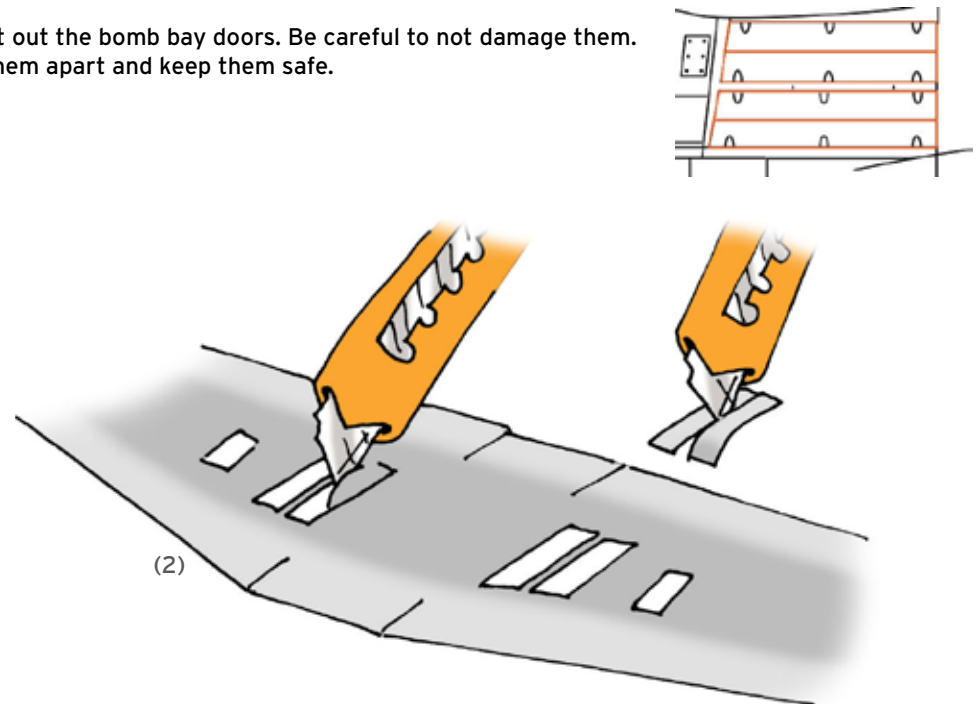

For the **bomb bays**, you will need 4 small bombs

2. If you **do not build the bomb bays**, jump to 8
If you do, build part (1) and cut out the dotted lines

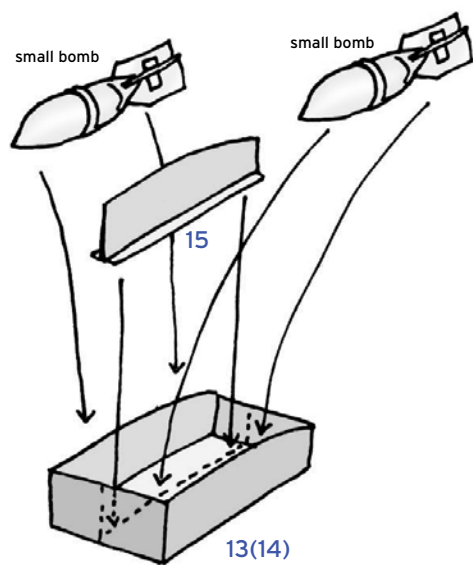

part (1) looks different on late
Il-2 versions, but is dealt with the same

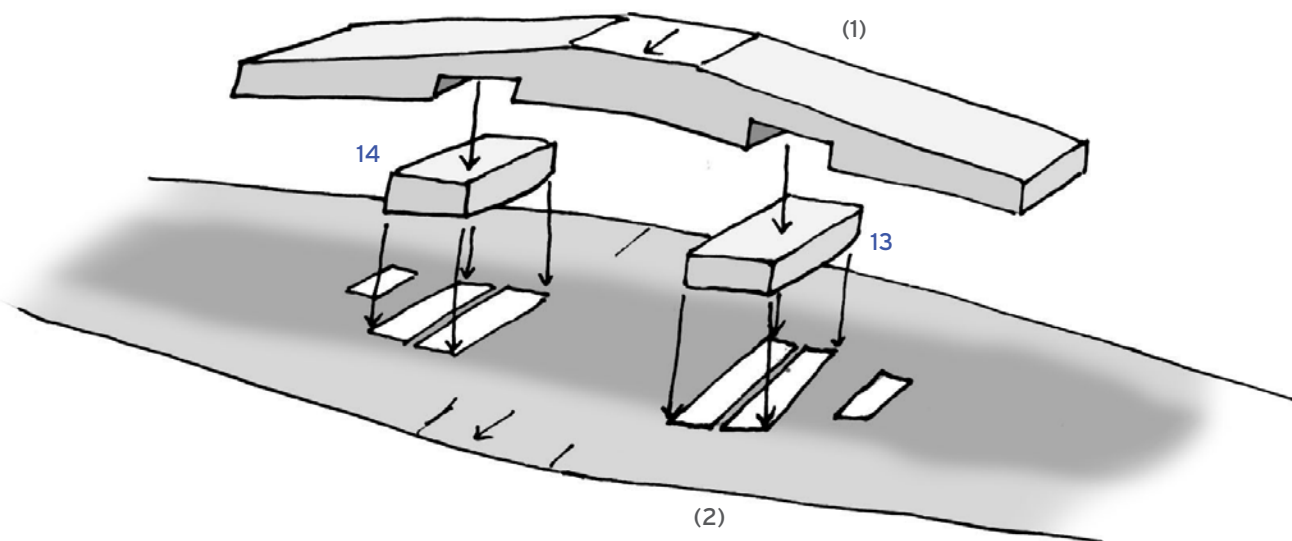

3. Cut out the bomb bay doors. Be careful to not damage them.
cut them apart and keep them safe.

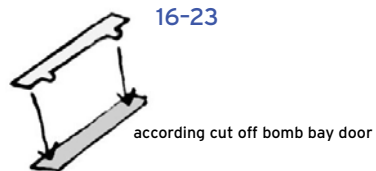

4. Build the bomb bays and glue the bombs into them.

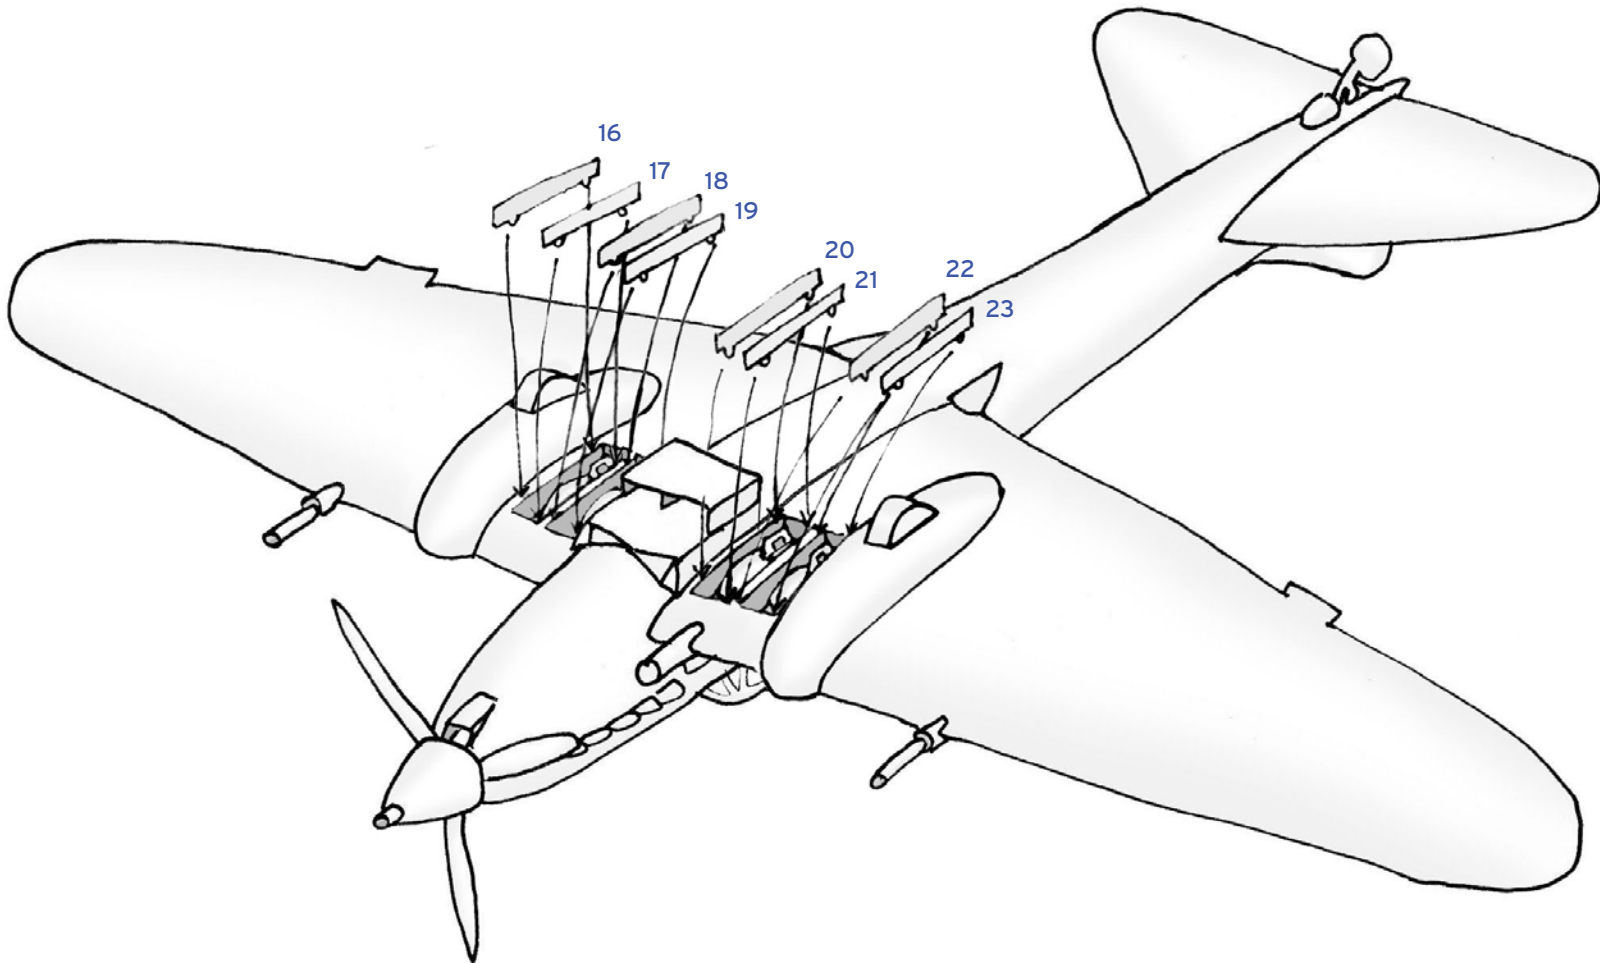

5. Glue the bomb bays onto the inner side of the lower wing surfaces.
Then follow through with Il-2 instructions Step 3 or 6 (depending on the version)

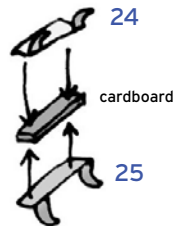

6. Glue the bomb bay door inner sides on the parts cut off in step 2.

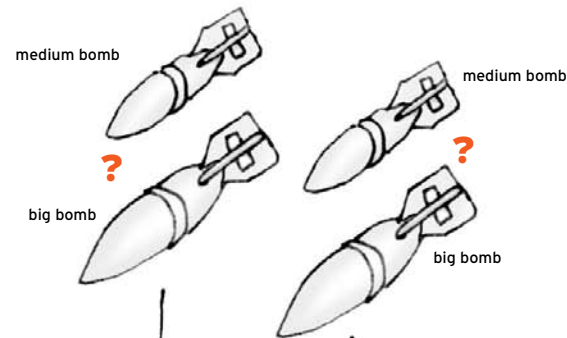

7. Glue the bomb bay doors in their positions

9. For bombs on external racks, glue together the racks, it helps to glue a part of stiff cardboard in between.

10. Glue the racks on the wing and the bombs on the racks. You may choose between medium bombs or small bombs.

for the **position of the bomb racks**, look for the two tiny markinks between the bomb bay doors:
