

La-7 cockpit instructions

Part designations use lowercase letters so they are not mixed up with parts of the aircraft model

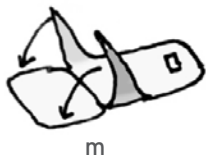

1. Glue the two handles on the panel

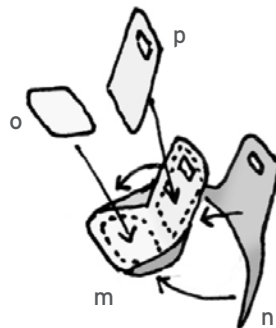

2. Fold the pedals and glue on the inside

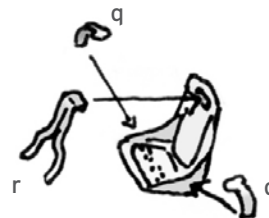

3. Glue the seat inner part together

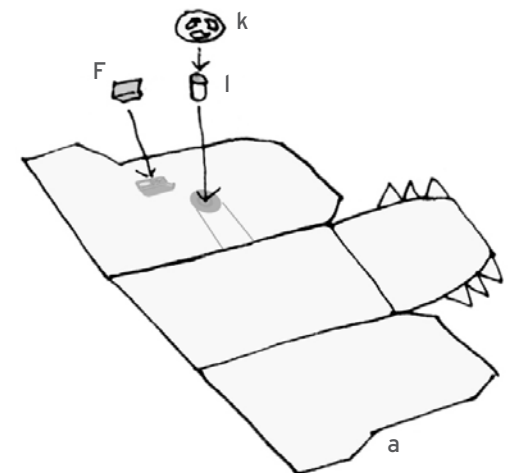

4. Glue on outer side and pillows (optional)

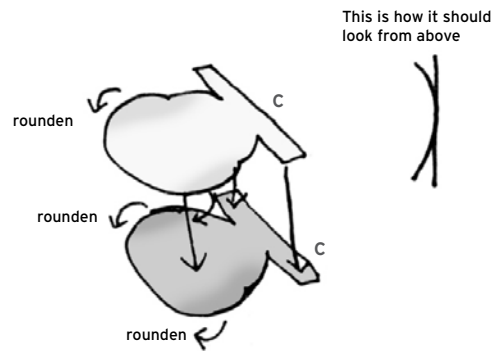

5. Glue on the seat belts

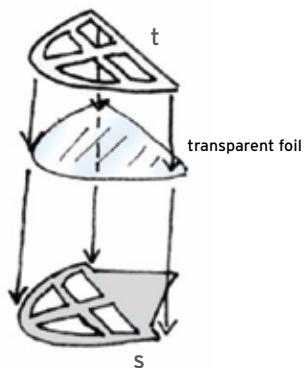

6. glue the crank on its axis and then on the cockpit wall. Glue the side panel on the wall. Look for the correct position on the artwork

7. Glue the armor parts together and rounden the upper part

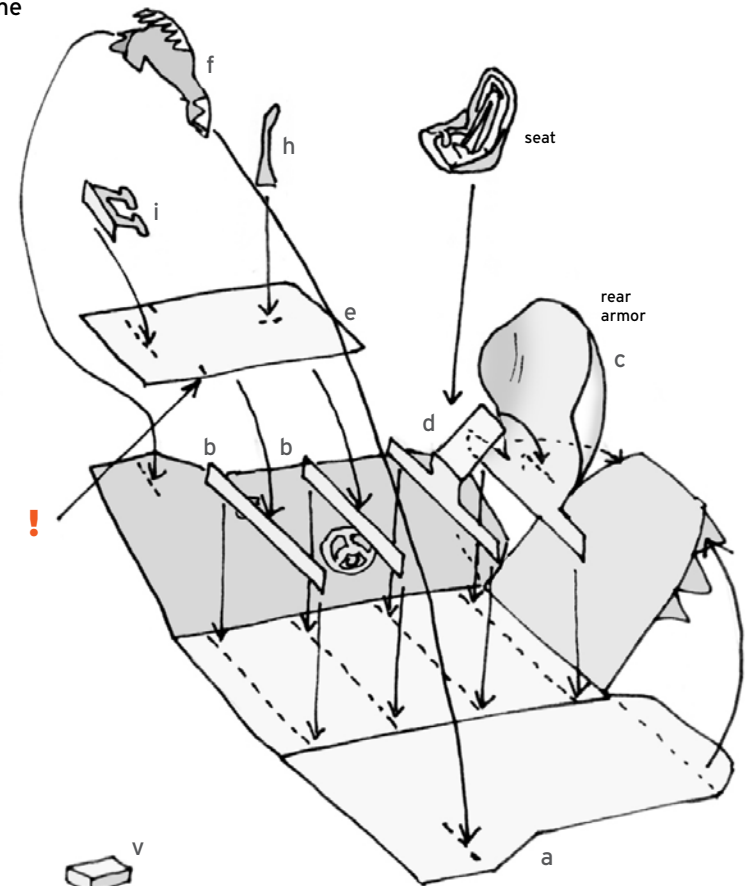

8. Glue together the parts of the glass armor with a bit of transparent foil in between

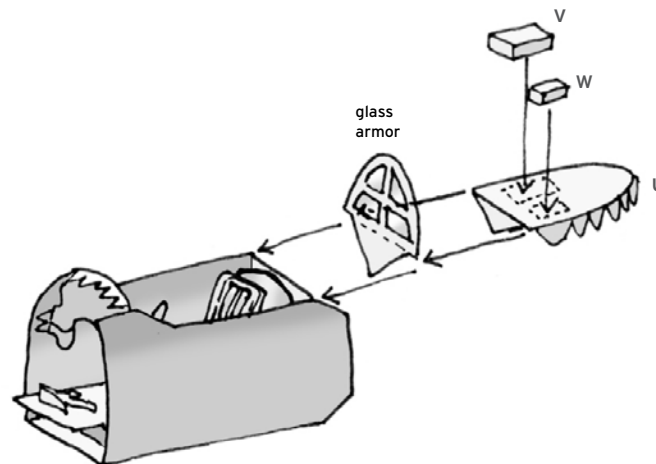

9. Main assembly. Glue the frames on the cockpit floor then add all else on top.

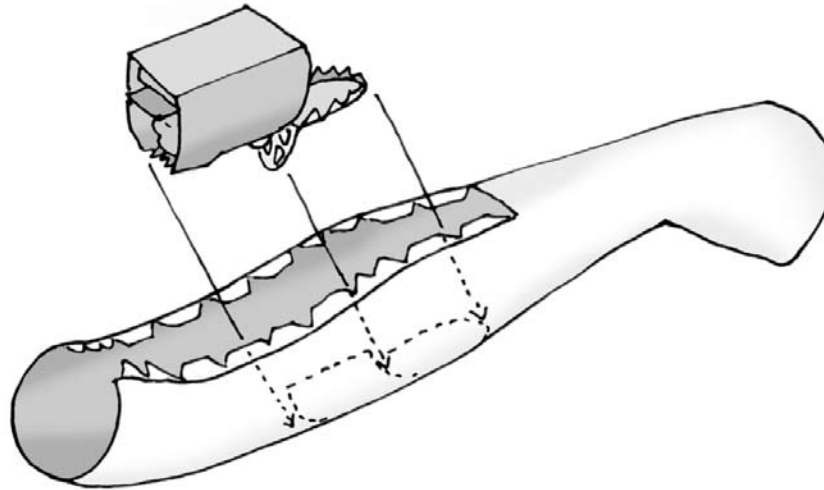

! this marking on the floor plate should be aligned with the forward end of the cockpit walls

10. Glue on the glass armor wall and the rear armature

11. Glue the cockpit into the fuselage

12. You may choose between a simplified and detailed gunsight:

Simplified gunsight

Fold and glue the gunsight, then glue onto armature

Detailed gunsight

Build the cylinder

Glue the glass and the dial on by wrapping their extensions around the cylinder

Glue the gunsight on the armature and add the pillow from below

13. Glue the armature on top of the panel
